USE-CASE FLOW SPECIFICATION

=====

Project: Dropshipping Inventory & Order Orchestrator

Problem Statement: #38

Use Case: UC-01 – Process Customer Order

Primary Actors: Storefront Platform, Supplier Partner, E-Store Owner

1. PRECONDITIONS

1. The Storefront Platform is connected to the system.
2. Supplier information and product-SKU mappings are configured.
3. A valid customer order has been placed.
4. Supplier inventory information is accessible.

2. MAIN SUCCESS SCENARIO

1. Storefront sends the customer order webhook.
2. System receives and validates the order.
3. System identifies the supplier for each SKU.
4. System verifies supplier inventory.
5. System splits multi-vendor orders.
6. System creates supplier purchase orders.
7. System dispatches the purchase orders.
8. Supplier processes the purchase order and provides shipment information.
9. System records the tracking number.
10. System updates the order and fulfillment status.
11. E-Store Owner views the updated status.
12. Use case ends successfully.

3. POSTCONDITIONS

1. Customer order has been processed.
2. Supplier purchase orders have been created and dispatched.
3. Supplier fulfillment status is stored.
4. Tracking number is stored.
5. E-Store Owner can view order and shipment status.

4. ALTERNATE FLOW

- A1. Supplier SKU Out of Stock

- 4a1. System identifies the SKU as unavailable.
- 4a2. System does not create a purchase order for it.
- 4a3. System marks the affected item/order as On Hold.
- 4a4. System notifies the E-Store Owner.
- 4a5. E-Store Owner takes appropriate action.
- 4a6. Use case ends with the affected item/order on hold.
